

Designing

I need help with:

- **colours**
 - **theme** - ideally both light/dark, though one good theme should be enough
 - ◆ i think most people prefer light themes - **is it true?**
 - ◆ **Orange Tiger** exists (#f96815), I like it and would like to use it
 - **resources** - wanna learn about colours and get good at it
 - **tools** - how to use a colour wheel? what other good colour tools are out-there?
 - how to pick good colours for good gradients and in general?
- **logo**
 - i absolutely hate the current one
 - probably most important thing branding wise
 - second on the list b/c might use the theme colours
- **website design**
 - WordPress
 - App - see
- **pictures/illustrations**
 - not a priority, also not sure I want any
 - ◆ I hate generic photos of happy people at work
 - ◆ I also hate childish drawings
 - ◆ maybe product screenshots?
- **fonts** - maybe, though I'm not sure yet I want custom fonts

I want:

- for **linktiger.com**
 - simple and clean, **zero bullshit**
 - ◆ example: <https://ackee.electerious.com/>
- for **my.linktiger.com**
 - decent and really humane UI i.e. intuitive
 - ◆ buttons that look like buttons
 - ◆ example from iCloud: <https://linktiger.com/shush/iCloud.html>
 - ◆ good colours for all states
 - ◆ on hover: more intense, implying that action is imminent?
 - ◆ on focus:
 - ◆ is there a better way besides gradients?
 - links that look like links
 - ◆ underlined
 - ◆ good colours that suggest that they're actionable

- ♦ not greyed out ignorable bland text
- ♦ also not distracting from the important things on the screen?
- other things to think about
 - ♦ input fields
 - ♦ other components
 - ♦ dialogs?
 - ♦ are Web Components decent yet?

Notes:

- all the big sites - Apple, Google, Figma etc. - use px for font-size
- browsers seem to default to 16px - is this on macOS only, i.e. are they emulating the system default font size?
- check on Windows and mobile
-
